## **Global Compliance Releases Enhancements to Information Management Portal**

*Expanded functionality enhances day-to-day workflow and all-inclusive analysis*

**Charlotte, N.C. – September 8, 2009** – [Global Compliance Services, Inc.](#), the leading global provider of governance, risk management, compliance and ethics solutions, announced today the enhancement of its IntegriLink<sup>SM</sup> Information Management portal.

The enhancement expands the capability for enterprise-wide visibility into all types of issues and incidents, and furthers the flexibility of workflow management, integrated information sharing, and robust analysis and trending all through a single sign-on portal. Functional aspects of the portal that received newly enhanced and differentiated functional capabilities include case assignments, task creation, reporter response, and summary reporting.

“Individual departments within organizations are confronted with a variety of issues that require unique handling, yet are often restricted in ability to view and manage across-the-board risk”, stated Rosalie Griebel, Director of Product Management for Global Compliance. “Following this release, our IntegriLink portal better enables cross-departmental management of specific issues, and also provides enterprise-level insight into performance and trends. The more streamlined framework ensures consistent treatment, disposition, and archival of information,” continued Griebel.

Committed to ongoing portal enhancements that are guided by continual client feedback, Global Compliance releases quarterly upgrades to its Information Management portal.
